Consensus statement on mandatory registration of clinical trials

The member journals of the Surgery Journal Editors Group (SJEG), in keeping with their commitment to high ethical standards and integrity in surgical publishing and surgical science, agree to adopt the position of the International Committee of Medical Journal Editors (ICMJE)^{1,2} requiring mandatory registration of all clinical trials, whether publicly funded or commercially sponsored, as a condition of consideration for publication. Additionally, the SJEG will require registration of Phase I and Phase II trials.

Specifically, the SJEG supports the idea of promoting a publicly accessible clinical trial database as suggested by the World Health Organization (WHO) International Clinical Trials Registry Platform established in August 2005, which specifies 20 key study data reporting requirements.² The goal of the WHO initiative and this SJEG requirement, based on the ICMJE statement, is to promote transparency and honesty in reporting prospective clinical trial conduct and results (including negative results), to foster public trust, and to ensure that researchers behave in an ethically responsible manner toward patients and study participants.³

The SJEG member journals will require all clinical trials that prospectively assign human subjects to medical interventions, comparison groups, or control groups for the purpose of examining the potential health effects of such interventions, to be registered in one of several free, publicly accessible, non-profit electronically searchable databases such as the one administered by the National Library of Medicine (NLM), which is located at <http://www.clinicaltrials.gov>. The ICMJE defines medical interventions as those that include, among other things, drugs, surgical procedures, devices, behavioral treatments, and process-of-care changes.²

The required minimal registration data set includes a unique trial number established by the registry, funding source(s), primary researcher and public contact person, ethics committee approval, trial recruitment information, interventions and research hypotheses, and basic methodology.^{2,4}

The SJEG member journals will require registration of all prospective clinical trials as of July 1, 2007. Trials that begin after July 1, 2007, must register before enrollment of the first study subject, and trials that began before the deadline must register prior to editorial review. Submitted manuscripts must include the unique registration number in the abstract as evidence of registration.

Authors submitting manuscripts reporting on unregistered clinical trials may request consideration of their papers if they can provide sufficient evidence of merit, although we anticipate that all clinical trials will be registered after July 1, 2007.

This statement is being simultaneously published in the respective journals of the members of the Surgery Journal Editors Group, as follows:
